### C-200 Fingerprint Proximity Clock

This best selling attendance clock provides the option to use Fingerprint identity (biometric) clocking or as a standard Proximity clock.

The Biometric option allows for greater security and prevents 'buddy clocking'.

#### Features:

- Colour TFT screen with GUI Interface for ease of use
- Optical Sensor
- 1 touch a-second user recognition
- Stores 3,000 templates and 100,000 transactions
- Reads Fingerprint and/or PINs
- Integrated proximity or smart card reader
- Built-in Serial and Ethernet ports
- Built-in USB port allows for manual data transfer when network isn't available
- Multi Language Support
- Built in bell scheduling
- Audio-Visual indications for acceptance and rejection of valid/invalid fingers

#### Specifications:

- Card Capacity 30,000
- Transaction Capacity 100,000
- Hardware Platform ZEM510
- Sensor: Optical Sensor
- Communication RS232/485, TCP/IP, USB-client
- Card support ID Card (Standard), optional HID/Mifare Card
- Display 3 inches TFT Screen
- Power Supply 5V DC 2A
- Operating Temperature 0 - 45 C
- Operating Humidity 20% - 80%

#### Also Included:

- Full Instructions
- PC software
- Sage Payroll Link

## Fingerprint or Biometric Clocking – How It Works

Employees clock 'in and out' simply by pressing their finger onto the scanner of the clock. They will get an audible and visual message to say that the scan is successful. Each employee can make up to 16 attendance clockings per day.

## Proximity Clocking – How It Works

Employees can use the C-200 proximity time clock to register their attendance simply by passing their personal RFID proximity badge or key fob in front of the C-200 clock. They will receive an audible and visual message to confirm the clocking. For additional security a personal 'pin' number can also be used.

## Fingerprint Capacity & Recording

The clocking terminal can store multiple biometric fingerprints for each employee enabling them to record every finger if required. (Fingerprints can be damaged by scratches or burns, so it is advisable to record at least two prints for each employee). To register each employee, three images of each fingerprint are taken at the clocking terminal, which is approximately a 10 second process.

## Clocked Data Storage

Employee's attendance clockings are stored in the C-200 clock until they are downloaded to the attendance software where individual employee time sheets are calculated and a selection of reports is available to manage attendance and payroll data. Employee attendance data will be stored indefinitely on your server.
